DELTA®

30-YEAR WARRANTY FOR THE NEW DELTA-XX PLUS® FAMILY

You can depend on DELTA®.

“The roofing membrane is the weak point of the roof.” This was the challenge for our new mission. The goal: to develop roofing membranes with very high longevity. Our pioneering discovery: the movement of air above the sheeting is a problem that causes premature ageing. Using this knowledge, we have optimised our roofing membranes and tested them in a testing procedure newly used by DÖRKEN. This is now offered by an independent test institute and is an established component of the EAD for roofing membranes. The new material composition ensures high functionality and longevity of our DELTA-XX PLUS® family – **for roofs that are here to stay.**

The DELTA® warranty:

- 🔹 If, in spite of being laid expertly, a problem occurs with our products within the 30-year warranty period, we are there for you.
- 🔹 We not only replace material as required, the product is also installed professionally. Undamaged materials are reused.
- 🔹 One call and we take care of it.

Our warranty promise:

At DELTA® we guarantee that our roofing membranes fulfil their function for 30 years when installed correctly (resistance against water penetration: W1 class). We back this up with nearly 60 years of experience in the manufacture and testing of high-performance pitched roof membranes.

Discover the new DELTA-XX PLUS® family now!

FURTHER BENEFITS AT A GLANCE:

Premium longevity

Our DELTA-XX PLUS® standard roofing membranes are characterised by proven longevity, ensuring longlasting protection for roofs. In addition, we also grant a 30-year warranty of function – our promise for your security.

Optimised range

With the four XX PLUS variants we cover a large amount of the applications in the area of pitched roofs:

- ▶ **DELTA-XX PLUS® LIGHT**
the economical solution for rafter roofs
- ▶ **DELTA-XX PLUS® UNIVERSAL**
the universal sarking and sheathing membrane
- ▶ **DELTA-XX PLUS® STRONG**
the ideal solution for large lath distances
- ▶ **DELTA-XX PLUS® HEAVY**
the robust solution for boarded roofs

Our product portfolio ensures high product availability. The consulting of our customers is also more efficient, with lower sales costs.

Practical self-adhesive strips

The integrated self-adhesive strips can be applied directly and reliably prevent the penetration of cold air and moisture to the insulation. This enables more energy efficiency and living comfort. At the same time, wind noise is also reduced.

Maximum flexibility

Thanks to their high elasticity, our DELTA-XX PLUS® products are simple and convenient to fit – including in difficult areas. The enormous flexibility ensures greater security in the event of unintentional contact with the toe cap (ladder) and tools.

DELTA®

LONG LIVE THE ROOF.
